Next level quality splints

The best protection with the highest wearing comfort. With the help of the thermoplastic properties of **optimill** memosplint and **dentona flexisplint®** you now highly increase the precision and efficiency of your splints and ensure a very easy handling for both patients and dentists. This special material is designed for the production of therapeutic, reflex, positioning and stabilizing splints.

> Inspiring coordinated solutions

Milling blank

Powder liquid

class IIa certified + FDA listed

Maximum safety against breakage through thermoelastic flexibility

Memory effect: 100% reset at body temperature without loss of surface hardness

This innovative material for the splint production is a thermoelastic resin. The material is slightly more flexible at body temperature in the patient's mouth and guarantees the highest wearing comfort.

Your benefits

- Tension-free comfort and precise adjustment thanks to memory effect
- Very durable due to maximum break resistance
- Lasting clarity for almost unnoticed wear
- flexisplint can be used for splint reparings and add-ons made with memosplint
